

SOURABH LAGALI

Fresher – Linux — AWS — DevOps — Cloud Engineering

India – 9482661188 – souron33@gmail.com – linkedin.com/in/sourabh-lagali – https://github.com/sourabhlagali

PROFESSIONAL SUMMARY

Computer Science Engineering graduate with hands-on experience building Linux-based automation, AWS cloud infrastructure, containerized applications, and CI/CD pipelines through practical projects. Skilled in Linux administration, Bash scripting, Git, AWS, Docker, Terraform, and GitHub Actions. Seeking an entry-level DevOps / Cloud Engineer role to apply infrastructure automation, deployment, troubleshooting, and cloud engineering skills.

TECHNICAL SKILLS

Cloud: AWS – EC2, S3, IAM, VPC, Security Groups, RDS, CloudWatch, Load Balancer

DevOps: CI/CD, GitHub Actions, Docker, Terraform, Ansible

Linux: Ubuntu, Linux Administration, SSH, Permissions, Processes, Services, systemd, Cron, Log Analysis

Networking: TCP/IP, DNS, HTTP/HTTPS, IPv4, Subnetting, Ports, Routing, Firewalls

Programming/Scripting: Bash, Python

Version Control: Git, GitHub

Monitoring: AWS CloudWatch, Prometheus, Grafana

Web: Nginx, REST APIs

Databases: PostgreSQL, MySQL

PROJECTS

Smart Linux System Automation Toolkit

Linux — Bash — Cron — System Administration

- Developed a command-line Linux automation toolkit for system monitoring, log analysis, file organization, and automated backups.
- Automated repetitive administrative tasks using Bash scripts and cron jobs.
- Implemented disk, memory, CPU, process, and service monitoring.
- Added error handling and logging to improve troubleshooting and operational visibility.
- Used Linux permissions, processes, services, SSH, pipes, redirection, and command-line utilities.

AWS Web Application Deployment

AWS — EC2 — VPC — S3 — RDS — Nginx — Linux

- Deployed a web application on AWS using EC2 and configured a Linux-based application server.
- Designed a VPC architecture using public/private networking concepts and security groups.
- Configured Nginx as a reverse proxy for application traffic.
- Integrated AWS services including S3 and RDS.
- Configured CloudWatch monitoring and investigated application/server issues using Linux logs and system utilities.

Dockerized Application with CI/CD

Docker — GitHub Actions — AWS — GitHub

- Containerized a web application using Docker and created a reproducible application environment.
- Built a CI/CD pipeline using GitHub Actions to automate application testing and deployment.
- Implemented Docker image build and deployment workflows triggered by Git changes.
- Managed environment variables and application configuration securely.
- Documented the deployment workflow and rollback procedure.

Infrastructure as Code with Terraform

Terraform — AWS — VPC — EC2 — IAM

- Provisioned AWS infrastructure using Terraform instead of manual console configuration.
- Created reusable infrastructure configurations for networking and compute resources.
- Used Terraform variables, outputs, resources, providers, and state management.
- Applied infrastructure changes using `terraform plan` and `terraform apply`.
- Documented infrastructure setup and teardown procedures.

EDUCATION

Bachelor of Engineering / B.Tech – Computer Science Engineering

2024

Basaveshwara engineering college, Bagalkot

ADDITIONAL INFORMATION

- Hands-on practice with Linux server administration and AWS cloud infrastructure.
- Built and documented DevOps projects using GitHub.
- Interested in Cloud Engineering, DevOps, Infrastructure Automation, and Site Reliability Engineering.
